

skin care ingredients

solutions for the problems your skin is facing

A biodegradable chelator

biobased chelating agent, 1:1 alternative to EDTA

- preservative booster
- strong efficacy
- formulation compatibility

B upcycled colloidal sulfur

gentle alternative to benzoyl peroxide and salicylic acid

- treats acne, may reduce redness
- odor reduced vs traditional sulfur
- easily dispersible, cold processable

C hyaluronic matrix

intense hydration, with seven actives in one

- instant and long-lasting effects
- increases skin elasticity
- no thickener needed

D skin feel enhancer

nature-based dry emollient designed for touch

- sustainable castor derivative
- lightens the feel
- lubricious with medium playtime

E gelling agent

unique structuring agent for stick formulations

- sustainable castor derivative
- improves stick hardness
- high melting point wax

F petrolatum alternative

promotes moisturization by creating a barrier on the skin's surface

- sustainable castor derivative
- enhanced color stability
- low odor

G talc replacement

shea-based powder giving a satin-like skin feel

- shea butter in powder form
- improved skin after feel
- less greasy

H silicone alternative

fast spreading, dry emollient for solubilization of ultra-violet (UV) filters

- vegetable derived
- improved sensory performance
- low viscosity

I mineral sunscreen booster

for reduced ghosting (white cast) and uniform coverage

- fully aqueous dispersant
- improved SPF performance
- increased levels of biobased content possible
